

Horizon's Hajjmate Navigates Muslim Pilgrims Leader in Navigation Software Creates Custom Version for Hajj

Santa Clara, CA September 10, 2009 —

Horizon Navigation, a leader in GPS navigation software, today announced the availability of Hajjmate Navigation software for Windows Mobile based smartphones. Hajjmate has been specifically designed to assist Muslim tourists traveling to Makkah for the Hajj.

Hajjmate includes unique features to help navigate when traveling to the Muslim holy cities of Makkah and Madinah in addition to all of the features of Horizon's award winning NavMate navigation software. Custom points of interest have been added to enhance the high quality Navteq map of Saudi Arabia. Shortcuts to places like Mount Arafat, Mina Tent, and Muzdaliffah allow the tourist to quickly find these points of interest. The tourist can also store his hotel as a shortcut for direct return at the end of the day.

Hajjmate's user interface can be set to Arabic, English, or more than 20 other languages. Pedestrian and vehicle routing modes make it useful for both the Hajj and visiting other sites in Saudi Arabia by car.

Hajjmate is available at:

Horizon Navigation is a center of expertise for worldwide GPS navigation solutions with solutions for over 75 countries. Since 1989, the Horizon team has brought innovative and award winning navigation systems to market.

About Horizon Navigation

Horizon Navigation is celebrating 20 years as a leader in vehicle navigation systems. Horizon's NavMate® software accurately locates a vehicle and calculates the quickest and most efficient route to a destination.

After developing the first practical in-vehicle navigation systems for Avis rental cars in 1992, Horizon went on to enable navigation solutions for Ford of Europe, Chrysler, General Motors, Isuzu, Nissan and Porsche. Horizon technology can be found today in products from Asus, Jensen, Clarion, Dual, Valor and an ever growing list of famous brands in Europe, North America, Asia, Africa, South America and Australia.
